DIY HOW-TO REMOVE a VIRUS OR TROJAN HORSE VIRUS

Windows based PCs are notoriously susceptible to Trojan Viruses and Spyware infections. This can be caused by a number of different factors but making sure that your system is fully updated at Microsoft's update site is one of the best ways of preventing problems. You can verify that your system is completely up to date by visiting Microsoft's update site:

http://www.update.microsoft.com/microsoftupdate/v6/default.aspx?ln=en -us.

This guide explains in detail how to get rid of a Trojan Virus or Remove Trojan Horse infections from your computer system.

If you suspect that your computer system may have become infected with a Virus or Trojan Horse Virus, this guide will step you through the process of downloading, installing and configuring a free version of anti-virus / antispyware software on your computer system.

Many good free Virus Removal Software titles are available online today that are quite effective in eradicating most Trojan Virus infections. AVG Free is one that I have tried and have had good success in using. The free version that is available to download online will delete Spyware, get rid of Trojan Viruses, and perform a Malware scan as well. It is a great Spyware Removal Tool that I highly recommend. Removing a Trojan Horse Virus RUGUST 20, 2010

You can find the AVG web-site here: <u>http://free.avg.com/us-en/homepage</u>

On the website you will find the option to either download the free version or a more advanced version for a fee. After choosing the package that best suits your needs, download the virus removal software and save the file to your system hard drive.

Once the download has completed press 'RUN' to begin the installation.

You will be presented with the AVG setup program and for the most part you should be able to use all of the system default settings.

🕌 AVG Download Manager				
Welcome to the AVG setup program	, j			
The following screens will guide you through the process of installing AVG protection on your computer. Click the Next button to begin the installation, or Exit button to quit.				
WARNING: This program is protected by laws and international treaties. Unauthorized reproduction or distribution of this program, or any part of it, may result in severe civil an penalties. Violators will be prosecuted to the maximum extent allowed by law.	d criminal

If any unchecked components have been previously installed in an earlier version of the software on your computer, these components will be uninstalled.
Default < Back	Next ≥ <u>E</u> xit

Choose whether or not you would like to install the AVG Security Toolbar or set Yahoo as your default search provider. Press Next.

The software may force your web browser to close but we're almost finished with the installation at this point.

As the installation process concludes you will be prompted to 'Optimize Scanning Performance'. This takes a few minutes to complete but helps improve the performance of future scans.

Removi	ing a Trojan Horse Virus	RU	6UST 20, 2010
NG Optimiz	ation Scan	×	
Optimize scannin	ng performance		
ß	AVG Optimization Scan increases scanning performance by identifying trus files that do not require scanning. This will allow future virus scans to be mu faster.	ted uch	
	Optimize scanning now (recommended)]	
	Wait until the first scheduled scan starts]	

After the optimization process is complete a full system scan should be performed.

AVG may have minimized itself to the taskbar so you might have to open the AVG Command Console by either clicking on the taskbar icon or using the desktop shortcut.

Once you have opened the AVG Command Console select 'Computer Scanner' from the menu on the left and then select 'Scan Whole Computer' from the menu that opens.

7

This could take some time so you may wish to engage yourself with some other activity and check back periodically to monitor the progress.

With any luck any infections your system may have harboured will have been detected and quarantined.

Keep in mind removing Viruses and Spyware can be tricky; it is possible that not every infection will have been detected by just this one attempt at removal.
